

relativistic kinematics:

$$(P_A + P_B)^2 = \begin{pmatrix} E_{\text{cm}}(x_A + x_B) \\ 0 \\ E_{\text{cm}}(x_A - x_B) \end{pmatrix}^2$$

$$P_A = \begin{pmatrix} E_{\text{cm}} x_A \\ 0 \\ +E_{\text{cm}} x_A \end{pmatrix} \quad P_B = \begin{pmatrix} E_{\text{cm}} x_B \\ 0 \\ -E_{\text{cm}} x_B \end{pmatrix}$$

$$= 4E_{\text{cm}}^2 x_A x_B = E_{\text{cm}}^2 x_A^2$$

$$\hat{s} = (P_A + P_B)^2 + s^2 = s \cdot x_A x_B$$

$$\text{rapidity, } y = \frac{1}{2} \log \left( \frac{E + p_z}{E - p_z} \right)$$

$$y_{\text{hard}} = \frac{1}{2} \log \left( \frac{x_A}{x_B} \right)$$

pseudo-rapidity (for  $s=0$ )

$$\eta = -\log(\tan \theta_c)$$

$-1.5 < \eta < 1.5$  leptons

$-5 < \eta < 5$  jets

$$\cos \theta = \tanh(\eta)$$

$$\Delta R = \sqrt{(\Delta \eta)^2 + (\Delta \phi)^2}$$

$$E_T = E \cdot \sin \theta$$

symmetries and conserved quantities - clear

Standard Model - clear

properties of  $W^\pm, Z$

Production:

not whole proton take part in interaction, only partons  $\rightarrow$  carry fraction  $x$  of whole momentum  
each parton described by PDF  $f_i$

$$\sum_i \int_0^1 f_i(x) dx = 1$$

$\approx 1/6$  of momentum is carried by valence quarks

decay:  $W \rightarrow l \bar{\nu}_l$ , jets  $z \rightarrow l \bar{l}$ , jets,  $W_2 \bar{W}_2$   
 $m = 80.6 \text{ GeV}$   $13$   $43$   $m_z = 91.187 \text{ GeV}$   $10\%$   $70\%$   $10\%$

$$\frac{d\sigma}{dP_T} \propto \frac{1}{\sqrt{\frac{1}{4} M_W^2 - P_T^2}} \rightarrow \text{Jacobian - peak at } 1/2 M_W$$

## ▷ $Z^0$ -Pair production and search for new physics

background

top-quark pair-production

bottom-quark pair-production

$$gg \rightarrow H^0 \rightarrow ZZ \rightarrow 4e$$

SUSY  $\rightarrow$  for each fermionic degree of freedom there is a bosonic degree of freedom

$\rightarrow$  search for SUSY in 4<sup>th</sup> final states

neutralinos (mixing of Higgs and neutral gauge bosons)

$\tilde{L}$ -squark production

$\rightarrow$  search for 4<sup>th</sup> generation quark

$$gg \rightarrow d_s \bar{d}_s \rightarrow tW^- \bar{t}W^+ \rightarrow LW^+ W^- \bar{L}L^+$$

$\hookrightarrow$  two to four leptons

$$gg \rightarrow u_s \bar{u}_s \rightarrow LW^- \bar{L}W^+$$

$$\rightarrow Z' Z' \rightarrow 4l \quad \text{with } m_{Z'} > m_Z$$

## ▷ The ATLAS detector

- ▷ inner detector
- ▷ EM calorimeters
- ▷ hadron calorimeters
- ▷ muon chambers

Questions before lab session:

- 1.)  $m_Z^2 = (E_e + E_{e^+})^2 - (p_e - p_{e^+})^2 = (2p_e)^2 = 4p_e^2 \Rightarrow p_e = \frac{m_Z}{2}$
- 2.) same argument  $p_e = 1.5 \frac{\text{GeV}}{c}$
- 3.)  $p_W = p_e + p_{\nu}$
- 4.)
